# 1 INTRODUCTION

## 1.1 Background

Infrastructure is both a cause and a consequence of economic growth. The role of infrastructure in integrating countries into the global economy by providing transport services is well known. Infrastructure can also raise the quality of human capital, which is a key factor in achieving high and sustainable levels of growth. Improvements in the quality and quantity of infrastructure have a disproportionately positive impact on the poor, and thus play a vital role in reducing income inequality.

A well performing Transport structure is vital for a country's development. Investment in a country's infrastructure directly affects economic growth as producers find the best markets for their goods, reducing transportation time and cost, and generating employment opportunities.

Pakistan is gifted with a naturally geo-strategic location. It is at the periphery of South Asia on one side, and Central Asia on the other side. In the south, the Arabian Sea forms a gateway to the vast Eurasian hinterland. It is here that cultures of Central, West and South Asia crisscross. This ideal location makes Pakistan one of the most attractive and shortest routes for transit to the Central Asian Republics (CARs) as well as China. Indian trade to that region, in an economical / convenient manner, is also dependent on the availability of passage through Pakistan.

Pakistan's location provides economic advantage for freight transportation from the Indian Ocean to Afghanistan, China, and the Central Asian States.

Pakistan, with more than 200 million people, has a reasonably developed transport infrastructure. Road transport is the backbone of Pakistan's transport system. The 12,131 km long National Highways and 4,266 km long Motorway network (Figure 1-1) carries 80 to 90 percent of Pakistan's total traffic. Further development of the road network is expected to continue under the CPEC projects.

Figure 1-1: National Highway & Motorway Network in Pakistan

The precise and consistent traffic volume study is the basic pre-requisite for planning in the transport sector. The result of the study is used to assess the existing, predict the upcoming traffic demand and evaluate maintenance requirements of the highway and motorway network.

In order to update the data base of the current traffic conditions, National Transport & Research Centre (NTRC) is conducting a Permanent Traffic Count Program (Phase – 1) using automated devices for a period of 365 days at following sections of National Highways and Motorways:

- Motorway, M-1, Islamabad – Peshawar
- National Highway, N-5, Torkham – Kamra
- National Highway, N-35, Hassanabdal – Khunjerab
- National Highway, N-45, Nowshera – Chitral

M/s Finite Engineering et al. have been assigned the task to conduct classified and directional traffic count on the selected sections of highways / motorways.

## 1.2 Need Assessment

During the past few years, the traffic volume on the highway network has increased tremendously. The up gradation in the widening of highway is largely dependent upon the on-going traffic volume on that road. Thus, there is a need to obtain the latest classified traffic volume data on national highways and motorways. This will not only help in assessing the existing traffic pattern on road network but also support in obtaining actual vehicle classification data. The study will also help to identify critical flow time periods, determine the influence of large vehicles on vehicular traffic flow or document traffic volume trends.

## 1.3 Objectives

The main objective of this project is to get classified traffic counts which will be useful for:

- Planning and prioritization of highways;
- Design of highway projects;
- Planning of road maintenance;
- National transport statistics;
- Road safety measures; and,
- Traffic control

The traffic count information is useful for many other purposes such as for calculating road user costs, road classification, environmental appraisal, and cost-benefit analysis.

## 1.4 Survey Location

The traffic survey is conducted on North Bound (NB) and South Bound (SB) at following particular locations (Figure 1-2) on each highways / motorway section as discussed in 1.1.

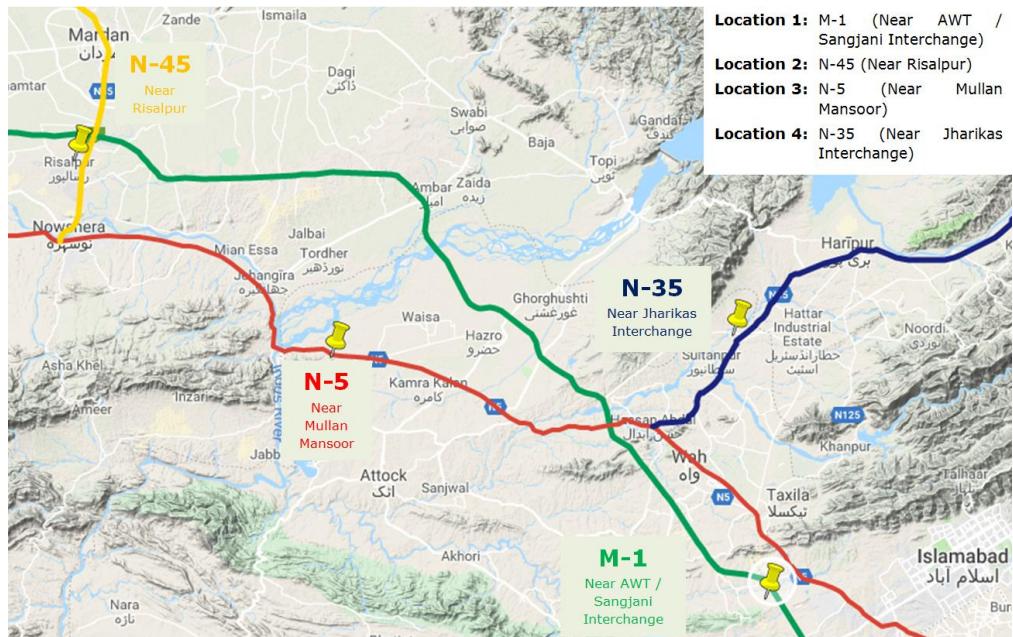

Figure 1-2: Traffic Survey Locations

The coordinates of survey points are mentioned in Table 1-1.

Table 1-1: Traffic Count Location Coordinates

Sr. No.	Highway / Motorway	Location	Coordinates
1	M-1	Near AWT / Sangjani Interchange	33°39'1.59"N 72°49'42.36"E
2	N-5	Near Mullan Mansoor	33°53'26.73"N 72°18'45.61"E
3	N-35	Near Jharikas Interchange	33°54'37.18"N 72°47'6.49"E
4	N-45	Near Risalpur	34° 5'4.02"N 72° 0'25.68"E

## 1.5 Vehicle Classification

The traffic volume plying on road network is composed of various vehicle types. The different vehicle categories classified during traffic survey is mentioned in Table 1-2.

Table 1-2: Vehicle Classification

Sr. No.	Vehicle Categories
1.	Motorcycle
2.	Motor Rickshaw
3.	Car / Jeep / Pajero / Taxi
4.	Hiace / Minibus

Sr. No.	Vehicle Categories	
5.	Large Buses	
6.	Light Truck	
7.	2 Axle Truck	
8.	3 Axle Truck	
9.	4 Axle Truck	
10.	5 Axle Truck	
11.	6 Axle Truck	
12.	Others	

## 1.6 Equipment Used

The Consultants have used Pneumatic Tubes for conducting classified traffic count survey. Pneumatic road tube sensors send a burst of air pressure along a rubber tube when a vehicle's tires pass over the tube. The pressure pulse closes an air switch, producing an electrical signal that is transmitted to a counter or analysis software. The pneumatic road tube sensor is portable, using lead-acid, gel, or other rechargeable batteries as a power source. The road tube is installed perpendicular to the traffic flow direction.

The Consultants will also verify and ensure quality of data obtained from Pneumatic Tubes, by means of video recordings at each survey location before submission to the client.

## 1.7 The Report

This report deals with traffic count survey and analysis for the month of March, 2020. The results of traffic count survey executed on national highways and motorways are presented in succeeding sections.

## 2 MOTORWAY (M-1)

### 2.1 General

The Motorway M-1 is an east-west motorway in Pakistan, connecting Peshawar to Islamabad-Rawalpindi. The motorway is 155 km long, with 88 km in Khyber Pakhtunkhwa and 67 km in Punjab. The M-1 has become a vital link to Afghanistan and Central Asia and is expected to take heavy traffic off the highly used N-5 National Highway. The motorway is also a part of the Asian Highway AH1 and AH4. The summary results of traffic count survey conducted near AWT / Sangjani Interchange on M-1 (Figure 2-1) is illustrated in following sub-sections. The detailed traffic data counted during survey is presented in Annex-1: Motorway M-1.

Figure 2-1: Traffic Count Location on M-1

#### 2.1.1 Vehicles per Day on M-1

The traffic volume per day for each vehicle classification plying on Motorway M-1 is presented in Table 2-1. The table also illustrates daily factor of traffic moving on M-1. The daily traffic volume and daily factor are graphically presented in Figure 2-2 and Figure 2-3 respectively.

Table 2-1: Traffic Volume per day on Motorway M-1

Date	Motor cycle	Motor Rickshaw	Car / Jeep / Pajero / Taxi	Hiace / Mini Bus	Large Buses	Light Truck	2 Axle Truck	3 Axle Truck	4 Axle Truck	5 Axle Truck	6 Axle Truck	Others	Total	Daily Factor

### 2.1.2 Average Daily Traffic on M-1

The Average Daily Traffic (ADT) as calculated from the traffic data is mentioned in Table 2-2.

Table 2-2: Average Daily Traffic (ADT) on M-1

Vehicle Classification	Motor cycle	Motor Rickshaw	Car / Jeep / Pajero / Taxi	Hiace / Mini Bus	Large Buses	Light Truck	2 Axle Truck	3 Axle Truck	4 Axle Truck	5 Axle Truck	6 Axle Truck	Others	Total
<b>Total Traffic During the Month</b>	0	0	811393	38093	49341	13011	29907	10885	21285	76	1070	135	975196
<b>Average Daily Traffic</b>	0	0	26174	1229	1592	420	965	351	687	2	35	4	31459

### 2.1.3 Traffic Distribution on M-1

The composition of traffic per hour plying on North Bound and South Bound is presented in Table 2-3. The percentage of traffic for each vehicle category on North and South Bound is graphically presented in Figure 2-4 and Figure 2-5 respectively.

Table 2-3: Traffic Composition in NB & SB Directions on M-1

Time		Traffic Composition

### 2.1.6 Proportion of Traffic in Day and Night on M-1

The traffic count data on M-1 is organized and sorted in a way to calculate proportion of traffic in day and night time. The percentage of traffic moving on M-1 from 8 am in morning to 8 pm in evening and from 8 pm to 8 am is tabulated in Table 2-7 and is graphically presented in Figure 2-9.

Table 2-7: Percentage of Traffic Composition in Day and Night Time on M-1

### 3 NATIONAL HIGHWAY (N-5)

#### 3.1 General

The National Highway N-5 (also known as Grand Trunk Road) is a 1819 Km long and is the longest National Highway in Pakistan, which extends from Karachi in Sindh province to Torkham in the Federally Administered Tribal Areas (FATA). The highway serves as an important north–south road artery, extending through Hyderabad, Moro and Khairpur in Sindh before crossing into Punjab province where it passes through Multan, Sahiwal, Lahore, Gujranwala, Gujrat, Jhelum and Rawalpindi. At Rawalpindi, it turns eastwards and passes through Attock Khurd before crossing the Indus River into Khyber Pakhtunkhwa to continue through Nowshera and Peshawar before entering the Khyber Pass and reaching the border town of Torkham in the FATA. The length of the highway is divided as follows (Table 3-1):

Table 3-1: Length of National Highway (N-5)

Sr. No.	Province	Length (KM)
1	Punjab	1,021
2	Sindh	671
3	Khyber Pakhtunkhwa	127
4	FATA	38

The summary results of traffic count survey conducted near Mullan Mansoor on Torkham – Kamra section of N-5 (Figure 3-1) is illustrated in following sub-sections. The detailed traffic data counted during survey is presented in Annex-2: National Highway N-5.

Figure 3-1: Traffic Count Location on N-5

#### 3.1.1 Vehicles per Day on N-5

The traffic volume per day for each vehicle classification plying on National Highway N-5 is presented in Table 3-2. The table also illustrates daily factor of traffic moving on N-5. The daily traffic volume and daily factor are graphically presented in Figure 3-2 and Figure 3-3 respectively.

Table 3-2: Traffic Volume per day on Motorway N-5

### 3.1.3 Traffic Distribution on N-5

The composition of traffic per hour plying on North Bound and South Bound is presented in Table 3-4. The percentage of traffic for each vehicle category on North and South Bound is graphically presented in Figure 3-4 and Figure 3-5 respectively.

Table 3-4: Traffic Composition in NB & SB Directions on N-5

Time		Traffic Composition

### 3.1.6 Proportion of Traffic in Day and Night on N-5

The traffic count data on N-5 is organized and sorted in a way to calculate proportion of traffic in day and night time. The percentage of traffic moving on N-5 from 8 am in morning to 8 pm in evening and from 8 pm to 8 am is tabulated in Table 3-8 and is graphically presented in Figure 3-9.

Table 3-8: Percentage of Traffic Composition in Day and Night Time on N-5

Vehicle Classification	Motor cycle	Motor Rickshaw	Car / Jeep / Pajero / Taxi	Hiace / Mini Bus	Large Buses	Light Truck	2 Axle Truck	3 Axle Truck	4 Axle Truck	5 Axle Truck	6 Axle Truck	Others	Total

## 4 NATIONAL HIGHWAY (N-35)

### 4.1 General

The Karakoram Highway (N-35) with a total length of 803 Km connects provinces of Punjab, Khyber Pakhtunkhwa and Gilgit-Baltistan with China's western Xinjiang Uyghur Autonomous Region. On the Chinese side it becomes the China National Highway 314. The highway passes through Karakoram mountain range at an elevation of 4,714 meters making it a popular tourist attraction. The summary results of traffic count survey conducted near Jharikas Interchange on N-35 (Figure 4-1) are illustrated in following sub-sections. The detailed traffic data counted during survey is presented in Annex-3: National Highway N-35.

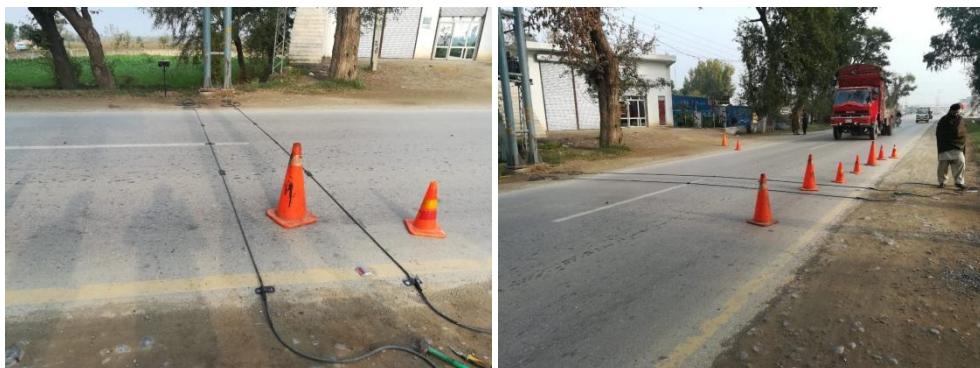

Figure 4-1: Traffic Count Location on N-35

### 4.1.1 Vehicles per Day on N-35

The traffic volume per day for each vehicle classification plying on National Highway N-35 is presented in Table 4-1. The table also illustrates daily factor of traffic moving on N-35. The daily traffic volume and daily factor are graphically presented in Figure 4-2 and Figure 4-3 respectively.

Table 4-1: Traffic Volume per day on Motorway N-35

#### 4.1.3 Traffic Distribution on N-35

The composition of traffic per hour plying on North Bound and South Bound is presented in Table 4-3. The percentage of traffic for each vehicle category on North and South Bound is graphically presented in Figure 4-4 and Figure 4-5 respectively.

Table 4-3: Traffic Composition in NB & SB Directions on N-35

From	To	Traffic Composition												
		Motor cycle	Motor Rickshaw	Car / Jeep / Pajero / Taxi	Hiace / Mini Bus	Large Buses	Light Truck	2 Axle Truck	3 Axle Truck	4 Axle Truck	5 Axle Truck	6 Axle Truck	Others	Total
<b>North Bound</b>

#### 4.1.6 Proportion of Traffic in Day and Night on N-35

The traffic count data on N-35 is organized and sorted in a way to calculate proportion of traffic in day and night time. The percentage of traffic moving on N-35 from 8 am in morning to 8 pm in evening and from 8 pm to 8 am is tabulated in Table 4-7 and is graphically presented in Figure 4-9.

Table 4-7: Percentage of Traffic Composition in Day and Night Time on N-35

Vehicle Classification	Motor cycle	Motor Rickshaw	Car / Jeep / Pajero / Taxi	Hiace / Mini Bus	Large Buses	Light Truck	2 Axle Truck	3 Axle Truck	4 Axle Truck	5 Axle Truck	6 Axle Truck	Others	Total

## 5 NATIONAL HIGHWAY (N-45)

### 5.1 General

The National Highway N-45 is one of Pakistan National Highway running from Nowshera District to the town of Chitral via Dir in Khyber Pakhtunkhwa. It is a two lane highway with a total length of 309 km. The summary results of traffic count survey conducted near Risalpur on N-45 (Figure 5-1) are illustrated in following sub-sections. The detailed traffic data counted during survey is presented in Annex-4: National Highway N-45.

Figure 5-1: Traffic Count Location on N-45

#### 5.1.1 Vehicles per Day on N-45

The traffic volume per day for each vehicle classification plying on National Highway N-45 is presented in Table 5-1. The table also illustrates daily factor of traffic moving on N-45. The daily traffic volume and daily factor are graphically presented in Figure 5-2 and Figure 5-3 respectively.

Table 5-1: Traffic Volume per day on Motorway N-45

Date	Motor cycle	Motor Rickshaw	Car / Jeep / Pajero / Taxi	Hiace / Mini Bus	Large Buses	Light Truck	2 Axle Truck	3 Axle Truck	4 Axle Truck	5 Axle Truck	6 Axle Truck	Others	Total	Daily Factor

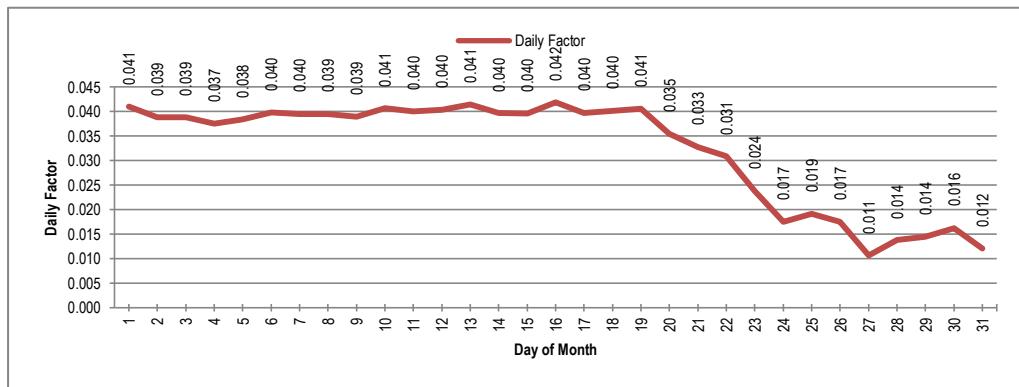

Figure 5-3: Daily Traffic Factor on N-45

### 5.1.2 Average Daily Traffic on N-45

The Average Daily Traffic (ADT) as calculated from the traffic data is mentioned in Table 5-2.

Table 5-2: Average Daily Traffic (ADT) on N-45

Vehicle Classification	Motor cycle	Motor Rickshaw	Car / Jeep / Pajero / Taxi	Hiace / Mini Bus	Large Buses	Light Truck	2 Axle Truck	3 Axle Truck	4 Axle Truck	5 Axle Truck	6 Axle Truck	Others	Total
Total Traffic During the Month	134562	35888	434378	87825	10741	18932	19224	23632	13893	1773	2768	822	784438
Average Daily Traffic	4341	1158	14012	2833	346	611	620	762	448	57	89	27	25304

### 5.1.3 Traffic Distribution on N-45

The composition of traffic per hour plying on North Bound and South Bound is presented in Table 5-3. The percentage of traffic for each vehicle category on North and South Bound is graphically presented in Figure 5-4 and Figure 5-5 respectively.

Table 5-3: Traffic Composition in NB & SB Directions on N-45

From	To	Traffic Composition

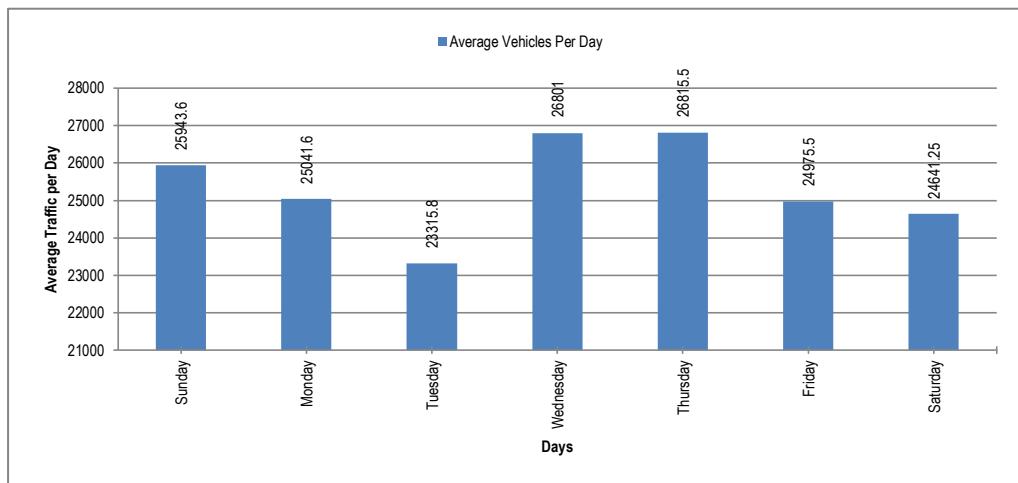

Figure 5-7: Weekly Trend of Traffic on N-45

### 5.1.5 Hourly Volume on N-45

The average hourly volume of traffic on N-45 is calculated and is tabulated in Table 5-6. The table also presents hourly factor of traffic on N-45. The hourly factor is graphically presented in Figure 5-8.

Table 5-6: Average Hourly Volume and Hourly Factor on N-45

From	To	Average Hourly Volume												Average Hourly Factor	
		Motor cycle	Motor Rickshaw	Car / Jeep / Pajero / Taxi	Hiace / Mini Bus	Large Buses	Light Truck	2 Axle Truck	3 Axle Truck	4 Axle Truck	5 Axle Truck	6 Axle Truck	Others	Total

### 5.1.6 Proportion of Traffic in Day and Night on N-45

The traffic count data on N-45 is organized and sorted in a way to calculate proportion of traffic in day and night time. The percentage of traffic moving on N-45 from 8 am in morning to 8 pm in evening and from 8 pm to 8 am is tabulated in Table 5-7 and is graphically presented in Figure 5-9.

Table 5-7: Percentage of Traffic Composition in Day and Night Time on N-45

Vehicle Classification	Motor cycle	Motor Rickshaw	Car / Jeep / Pajero / Taxi	Hiace / Mini Bus	Large Buses	Light Truck	2 Axle Truck	3 Axle Truck	4 Axle Truck	5 Axle Truck	6 Axle Truck	Others	Total
