1 INTRODUCTION

1.1 Background

Infrastructure is both a cause and a consequence of economic growth. The role of infrastructure in integrating countries into the global economy by providing transport services is well known. Infrastructure can also raise the quality of human capital, which is a key factor in achieving high and sustainable levels of growth. Improvements in the quality and quantity of infrastructure have a disproportionately positive impact on the poor, and thus play a vital role in reducing income inequality.

A well performing Transport structure is vital for a country's development. Investment in a country's infrastructure directly affects economic growth as producers find the best markets for their goods, reducing transportation time and cost, and generating employment opportunities.

Pakistan is gifted with a naturally geo-strategic location. It is at the periphery of South Asia on one side, and Central Asia on the other side. In the south, the Arabian Sea forms a gateway to the vast Eurasian hinterland. It is here that cultures of Central, West and South Asia crisscross. This ideal location makes Pakistan one of the most attractive and shortest routes for transit to the Central Asian Republics (CARs) as well as China. Indian trade to that region, in an economical / convenient manner, is also dependent on the availability of passage through Pakistan.

Pakistan's location provides economic advantage for freight transportation from the Indian Ocean to Afghanistan, China, and the Central Asian States.

Pakistan, with more than 200 million people, has a reasonably developed transport infrastructure. Road transport is the backbone of Pakistan's transport system. The 12,131 km long National Highways and 4,266 km long Motorway network (Figure 1-1) carries 80 to 90 percent of Pakistan's total traffic. Further development of the road network is expected to continue under the CPEC projects.

Figure 1-1: National Highway & Motorway Network in Pakistan

The precise and consistent traffic volume study is the basic pre-requisite for planning in the transport sector. The result of the study is used to assess the existing, predict the upcoming traffic demand and evaluate maintenance requirements of the highway and motorway network.

In order to update the data base of the present existing traffic conditions, National Transport & Research Centre (NTRC) is already conducting a Permanent Traffic Count Program (Phase I) using automated devices on National Highways and Motorways. In continuation of this, NTRC is extending permanent traffic count program in Phase II and conducting survey on following locations of National Highway N-5:

- Jhelum
- Pattoki
- Sutlej
- Sadiqabad
- Khairpur
- Kamoke
- Thatta

M/s Finite Engineering (Pvt.) Ltd. have been assigned the task to conduct classified and directional traffic count on the selected sections along National Highway N-5.

The National Highway N-5 (also known as Grand Trunk Road) is a 1819 Km long and is the longest National Highway in Pakistan, which extends from Karachi in Sindh province to Torkham in the Federally Administered Tribal Areas (FATA). The highway serves as an important north-south road artery, extending through Hyderabad, Moro and Khairpur in Sindh before crossing into Punjab province where it passes through Multan, Sahiwal, Lahore, Gujranwala, Gujrat, Jhelum and Rawalpindi. At Rawalpindi, it turns eastwards and passes through Attock Khurd before crossing the Indus River into Khyber Pakhtunkhwa to continue through Nowshera and Peshawar before entering the Khyber Pass and reaching the border town of Torkham in the FATA. The length of the highway is divided as follows (Table 1-1):

Table 1-1: Length of National Highway N-5

Sr. No.	Province	Length (KM)
1	Punjab	1,021
2	Sindh	671
3	Khyber Pakhtunkhwa	127
4	FATA	38

1.2 Need Assessment

During the past few years, the traffic volume on the highway network has increased tremendously (Figure 1-2). The up gradation in the widening of highway is largely dependent upon the on-going traffic volume on that road. Thus, there is a need to obtain the latest classified traffic volume data on national highways. This will not only help in assessing the existing traffic pattern on road network but also support in obtaining actual vehicle classification data.

Figure 1-2: Existing Traffic Pattern on National Highways

Traffic volume study will determine the number, movements, and classifications of roadway vehicles at the specified highway sections on N-5. This data will help to identify critical flow time periods, determine the influence of large vehicles on vehicular traffic flow and document traffic volume trends.

1.3 Objectives

The main objective of this project is to get classified traffic counts which will be useful for:

- Planning and prioritization of highways;
- Design of highway projects;
- Planning of road maintenance;
- National transport statistics;
- Road safety measures; and,
- Traffic control.

The traffic count information is useful for many other purposes such as for calculating road user costs, road classification, environmental appraisal, and cost-benefit analysis.

1.4 Survey Location

The traffic survey is conducted on North Bound (NB) and South Bound (SB) at following particular locations (Figure 1-3) on National Highway N-5.

Figure 1-3: Traffic Survey Locations

The coordinates of survey points are mentioned in Table 1-2.

Table 1-2: Traffic Count Location Coordinates

2	Kamoke	31°53'28.00"N 74°14'16.55"E

7	Thatta	24°44'41.62"N 67°52'10.05"E

1.5 Vehicle Classification

The traffic volume plying on road network is composed of various vehicle types. The different vehicle categories classified during traffic survey is mentioned in Table 1-3.

Table 1-3: Vehicle Classification

Sr. No.	Vehicle Categories	
1.	Motorcycle	

Sr. No.	Vehicle Categories

1.6 Equipment Used

The Consultant has developed software for quantifying traffic volume from video processing on real time basis. This image recognition technology detects the vehicles and captures details about individual vehicles and displays them on the screen. A video processing system usually monitors multiple lanes simultaneously, and therefore, it requires high level of computing power. A number of prototypes were assessed for attaining better accuracy of each vehicle category using vehicle dimensions and image recognition technique simultaneously. However, if any vehicle remained unidentified while crossing in a cluster, the particular image at that time of the video was captured and stored in the queue for manual counting afterwards. The Consultant has also managed cloud based virtual server for providing live streaming facility to the client. For this, fastest and reliable Internet Service Provider (ISP) is engaged in the region. The Client not only examines the live video for each station

but can also inspect traffic count in real time. Following supporting equipment were installed by the Consultants at each location:

- IP Cameras
- NVR
- Lenovo Mini PC
- Batteries
- Solar Panels with Inverters
- TP Link Wireless Routers
- Zong 4G Bolt
- Cloud Based Virtual Server

1.7 The Report

This report deals with traffic count survey and analysis for the month of June, 2020. The results of traffic count survey executed on N-5 are presented in succeeding sections.

2 Jhelum (N-5)

2.1.1 Vehicles per Day at Jhelum (N-5)

The traffic volume per day for each vehicle classification plying at Jhelum (N-5) is presented in Table 2-1. The table also illustrates daily factor of traffic at Jhelum (N-5). The daily traffic volume and daily factor are graphically presented in Figure 2-1 and Figure 2-2 respectively.
